## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

2. Claims 1, 2, 47-49 are rejected under 35 U.S.C. 102(b) as being anticipated by Funamoto et al (US 6,213,381).

Funamoto et al disclose the method of bonding metal plates comprising the steps of applying a first and second shearing blades of specific shape one onto both sides of overlapping metal plates. Forming a bonded portion by making use of the deformation of each sheared surface during the shearing process, wherein the bonded portion or bonded surface is formed in an oblique direction inclined, less than 75 degrees, with respect to the thickness direction of the metal plate as shown in the figures (col. 21, lines 20-36). The first and second shearing blades are moved in opposing directions shown in figure 11a and b.

*Response to Arguments*

3. Applicant's arguments filed 12/27/02 have been fully considered but they are not persuasive.

Applicant argues that Funamoto et al do not have sufficient bonding strength during a short time while keeping deformation of bending of the bonded plates to a minimum. However, applicant's argument is not in commensurate with the scope of the claims, since the claimed invention is not defined over the prior art, US 6,213,381. In addition, applicant also argues that the plate movability of Funamoto et al is reduced because the plates are bent toward the support side. However, applicant did not claim this distinction in any of the independent claims. Therefore, claims 1, 2, and 47-49 remain rejected.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1725

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
